

A RESEARCH DIRECTORY, NOT A RETURN RANKING

100 U.S. Short-Term Rental Markets

Find a market to study. Not a promise to buy.

Compare public benchmarks, read the limits and build a short list. Then test one property with matched data.

EDITION

21 September 2026
Design revision

FORMAT

Field guide + Excel
U.S. short-term rentals

USE

Educational tools
Not investment advice

Read this first

Market averages are a starting point, not a property forecast.

This directory includes 100 U.S. locations worth further research. The numbers are public vendor benchmarks. They do not describe one ready-to-rent home.

LIST IDS ARE NOT RANKINGS

The numbers 001-100 help you find each market in Excel. They do not rank expected returns, legal access or investment quality.

COVERAGE	WHAT THE ORIGINAL RESEARCH CONTAINS
Performance	99 ADR and occupancy benchmarks. 98 historical annual-revenue benchmarks. 13 snapshots are undated.
Cost context	15 dated home-value observations. 16 rent observations. These appear in the Excel workbook.
Local rules	31 official-source reviews, including 2 partial county reviews. 69 local reviews remain unresolved.
Missing data	Massanutten has no usable STR metrics here. Wilmington’s annual projection is not historical revenue.

Dates matter

Research date: 21 September 2026. Each observation has its own date. The redesign does not update the research or clear a property for legal operation.

Education only. Consult qualified legal, tax, lending and insurance advisers. Confirm the address, permit path and current facts before committing money.

Contents

Find the page you need. Keep the workbook open nearby.

	Your market research plan	34
	Notes and sources	35
	Source map and limits	36

HOW TO READ THIS

Start with the definitions. Use the directory to narrow your search. Open Excel for full evidence. End with a specific research task, not a purchase decision.

Read the numbers correctly

Keep the provider, date and measurement together.

PLAIN WORDS

ADR	Average paid nightly room rate in the vendor sample.
Occupancy	Booked nights as a share of available nights.
Annual revenue	The vendor's annual figure, not your expected profit.
RevPAR / RevPAN	Vendor revenue per available rental or night.

Do not force the numbers to match

$ADR \times occupancy \times 365$ is not substituted for annual revenue. Samples, availability, fees and weights can differ. The workbook keeps the vendor's RevPAR separate from a simple proxy.

Keep research hypotheses separate

Guest niches, market fit and opportunity labels are ideas to test. They are not measured demand or appreciation forecasts. A high annual revenue number does not prove strong cash flow.

Read the full research record in Excel

The PDF is the quick view. Excel holds full regulatory findings, housing and rent context, source dates, quality flags and a ten-place personal shortlist.

MISSING DOES NOT MEAN ZERO

A blank field means a usable number was not available in the research. An undated snapshot needs a refresh. Do not treat either as a forecast.

DO THIS WEEK

- ☐ Choose a guest niche you can serve well.
- ☐ Open one market's Regulation and Source Register rows.
- ☐ Write down what must be verified before testing a property.

Notes and sources

Performance sources

Public AirDNA pages are the main source. Selected Rabbu pages replace highly discontinuous public series. The sources are not averaged or blended.

The Excel Source Register links each market to its source. It also stores dates, definitions and rejected-source notes. Click the source name on a directory page to open it.

Cost context stays in Excel

Zillow observations use labeled home-value or rent measures. ZHVI, ZORI and asking-rent averages are not the same metric. Use them as context, not a quote for your property.

A supply jump may be a data change

Large changes in listings can reflect coverage or market boundaries. The flags do not prove demand growth. Refresh the sample and match its geography before drawing conclusions.

Local rules require a separate check

A vendor market boundary is not a legal jurisdiction. A mailing address may sit outside city limits. An official program page does not prove a permit is available.

For every market, verify the exact parcel, operating model, permit cap, transfer rules, private restrictions and written owner or lender consent.

RESEARCH SCOPE IS UNCHANGED

The original research date remains 21 September 2026. All 100 market records and their uncertainties are preserved. This edition changes presentation, not the evidence.
